Leading the Charge: Dentistry in Personalized Healthcare

featuring

Dennis M. Abbott, DDS

The course will cover the following:

The new standard of personalized healthcare looks beyond the occurrence of illness and focuses on biological data that helps predict risks of disease and anticipate response to treatment. While most assume this simply means a closer look into an individual's genetics, personalized healthcare takes into account *all* information...from genetics and genomics to biomarkers and biological systems integration. So how does this shift impact the dental professional? Over the past few years, our understanding of the oral health and systemic well-being relationship has expanded well beyond simply the link between diabetes and periodontal disease. The relevance of oral health is now undeniable; from cancer or cardiac disease, to dementia or sexual dysfunction, the condition of the mouth and one's overall health are irrefutably connected. With the opportunity to truly impact both dentistry and medicine, today's dental clinician must be equipped to provide excellence in not only clinical dentistry, but also applied oral medicine and health and wellness integration in order to meet the expectations of today's well-informed consumer.

Meet Your Professional Educator

Dennis M. Abbott, DDS is the CEO of Dental Oncology Professionals, an oral medicine practice dedicated to meeting the unique dental and oral health care needs of individuals battling cancer and cancer survivors. His unique approach to dentistry combines the broad scope of general dentistry with oral medicine and an understanding of the oral effects of oncology therapy for all types of cancer to build and implement an individualized treatment plan for the medically compromised patient to achieve dental clearance and maintain oral and systemic health throughout the cancer journey and into survivorship. Dr. Abbott's decision to take his practice in the direction of dental oncology stemmed from recognizing a need in a patient in remission from lung cancer and a realization that others with cancer were likely suffering similar destruction of the dentition. Since then, he has become one of the leading experts in the field of dental oncology. Dr. Abbott is also the founder of the American Academy of Dental Oncology.

Be sure to reserve time and stay for an enjoyable lunch at the famous **Raven's Grill**. For green fees and reservation information contact **The Texas Star Golf Course** at 817-685-7888.
